CM4 MODULE (PART #1)

SCH:

I2C0 Interface: SCL0 pin (GPIO45) and SDA0 pin (GPIO44) typically are used for Camera and Displays and have internal 1.8k pull up to CM4_3.3V. ID Interface (ID_SDID_SC): CM4 datasheet does not mention about pull-up resistors on ID_SD and ID_SC pins.

I2C1 (GPIO2/GPIO3) have 1.8k pull-up resistors added on CM4 module.

SCH:

I2C (ID_SDID_SC): This I2C bus is normally used for identifying HATS (HAT ID EEPROM) and controlling CSIO and DSIO devices. At boot time this I2C interface will be interrogated to look for an EEPROM that identifies the attached board and allows automatic setup of the GPIOs (and optionally, Linux drivers).

DO NOT USE these pins for anything other than attaching an I2C ID EEPROM. Leave unconnected if ID EEPROM not required.

SCH:

I2C0 (SDA0/SCL0): This internal I2C bus is normally allocated to the CSIO and DSIO as these devices are controlled by the firmware.

SCH:

nRPIBOOT: A low on this pin force booting from an RPI server. If not used leave floating. Internally pulled via 10K to +3.3V.

SCH:

EEPROM_nWP pin: Leaving floating NB internally pulled up to CM4_3.3V via 100K (VIL < 0.8V) but can be grounded to prevent writing to the on board EEPROM which stores the bootcode.

SCH:

1.8V and 3.3V Outputs +/-2.5%. Power Output max 300mA per pin for a total of 600mA. This will be powered down during power off or GLOBAL_EN being set low.

SCH:

GLOBAL_EN: Drive low to power off CM4. Internally pulled up with a 100K to +5V.

3V3 LOAD

SCH:

Extra load on the 3V3 power rail to fix the HDMI issue with 5V LED.

SYS LEDs

16-PIN GPIO HEADER

reserved for future use

GPIO pins - connect to specific devices

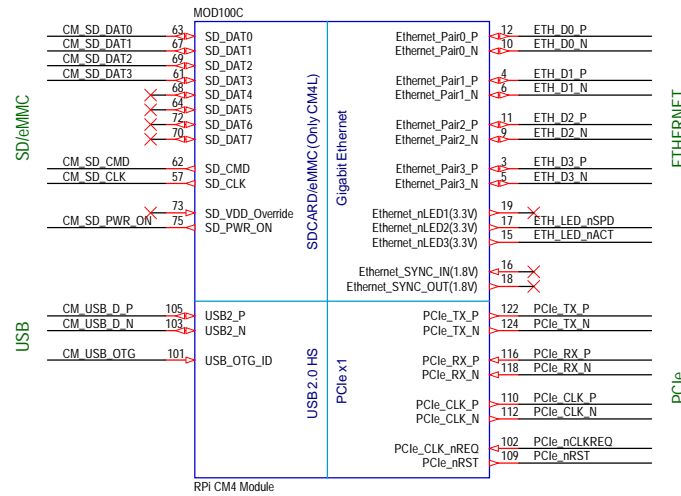

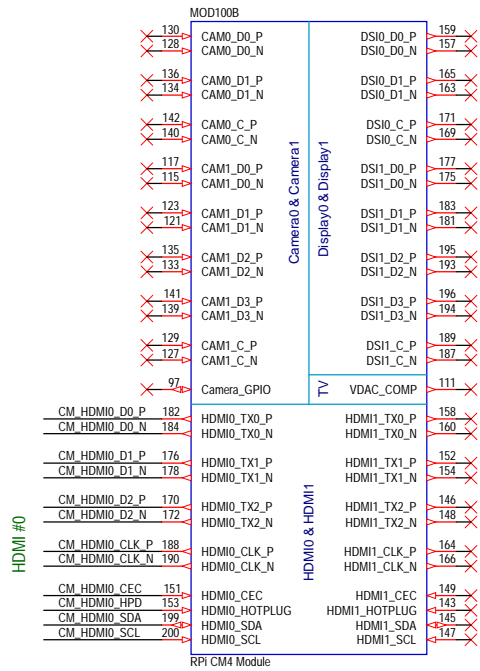

components - display 4 parameters: val/tol/pwr rating/package
power rail nets - use Google convention (e.g. PP3300)

Raspberry Pi Pinout

CM4 MODULE (PART #2)

SCH:

USB_OTG_ID: Input (3.3V signal) USB OTG Pin. Internal pulled up. The USB_OTG pin is used to select between USB host and device that is typically wired to the ID pin of a Micro usb connector. To use this functionality it must be enabled in the OS that is used. If using either as a fixed slave or fixed master, please tie the USB OTGID pin to ground.

MEZZANINE CONNECTORS

LAYOUT:

Route MIPI signals as matched length 100 Ohm differential pairs, each signal within a pair should ideally be matched to better than 0.15mm.

Route USB signals as matched length 90 Ohm differential pairs. The P N signals should ideally be matched to 0.15mm.

Route HDMI signals as matched length 100 Ohm differential pairs, each signal within a pair should ideally be matched to better than 0.15mm. Pairs don't typically need any extra matching as they only have to be matched to 25mm.

LAYOUT:

Route Ethernet signals as matched length 100 Ohm differential pairs with suitable clearances. Length matching between pairs should be better than 50mm, so in the typical case no length matching is required. However the signals within a pair need to be length matched, ideally to better than 0.15mm.

Route PCIe signals as matched length 90 Ohm differential pairs with suitable clearances. There is no need to match the lengths between pairs, only the signals within a pair need to be length matched ideally to better than 0.1mm.

LAYOUT:

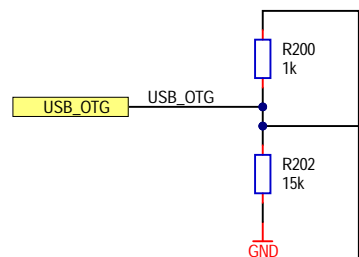

Impedance matching:
90 Ohm → PCIe, USB
100 Ohm → HDMI, Ethernet, MIPI (CSI, DSI)

USER:

USB_OTG line: if USB-C cable is connected and SW200 jumper has shorted 2-3 pins then the CM4 becomes a USB Device.

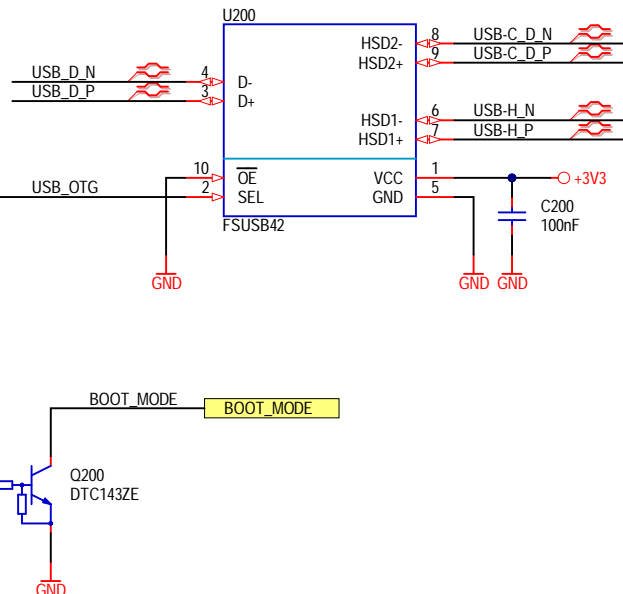

USB DEVICE MODE

USER:

USB DEVICE MODE JUMPER:
1-2 = USB Device disabled (OS BOOT).
2-3 = CM4 connected as USB Device to USB-C cable.

USB SWITCH

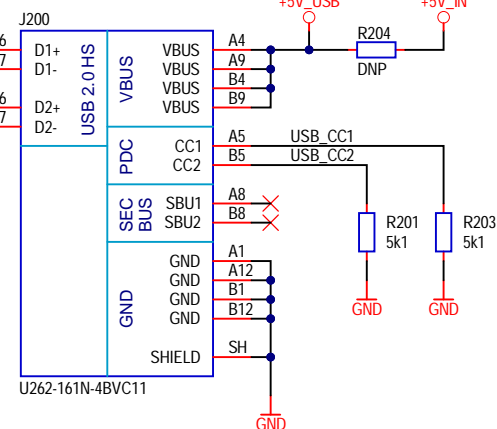

LAYOUT:

connect the IO1A - IO4A on the connector side.

LAYOUT:

Place the TVS array diodes as close as possible to the USB-C connector.

USB TYPE C

ESD PROTECTION

BOM:

USB 3.1 Type C:
Use XKB Connectivity, MPN = U262-161N-4BVC11.
Description: vertical connector, 16 pins, USB 2.0 only, SMD version.

LAYOUT:

Route USB signals as matched length 90 Ohm differential pairs. The P N signals should ideally be matched to 0.15mm.

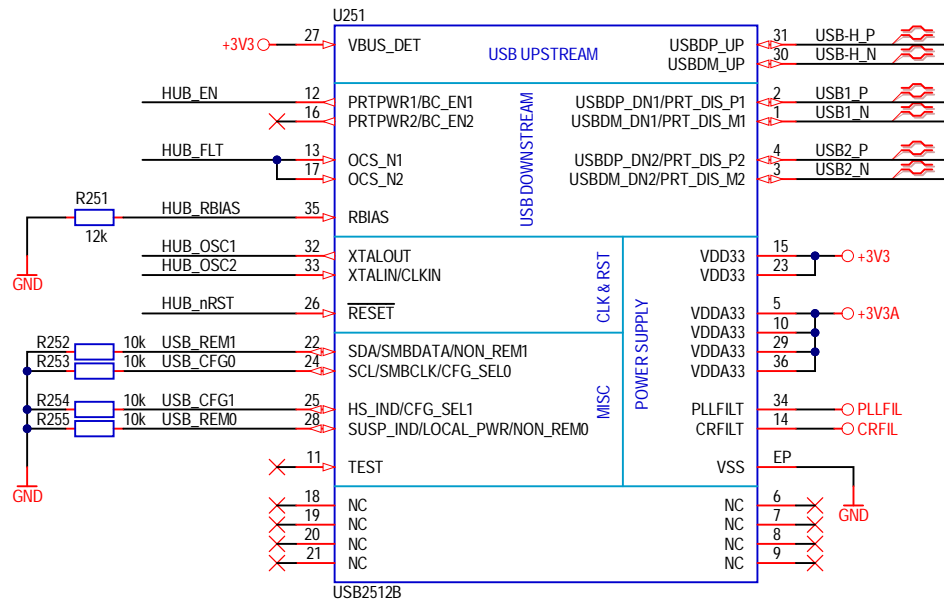

TESTPOINTS (DEBUG)

PCI Express x4

SCH:

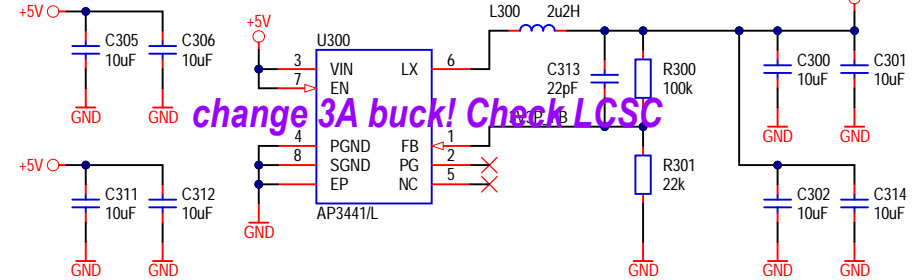

PCIe x4 reference board: PINE64 -ROCKPro64
https://files.pine64.org/doc/rockpro64/rockpro64_v21-SCH.pdf

AYOUT:

Route PCIe signals as matched length 90 Ohm differential pairs with suitable clearances. There is no need to match the lengths between pairs, only the signals within a pair need to be length matched ideally to better than 0.1mm.

+3.3V @3A

LAYOUT:

Place decoupling capacitors as close as possible to the Buck converter.

BOM:

2.2uH -> compatible components (7.3x6.6x2.4mm):
 Changjiang Microelectronics Tech, MPN = FXL0624-2R2-M
 Sumida, MPN = 0624CDMCCDS-2R2MC
 AVX, MPN = LMLP07B7M2R2DTAS

TESTPOINTS (DEBUG)

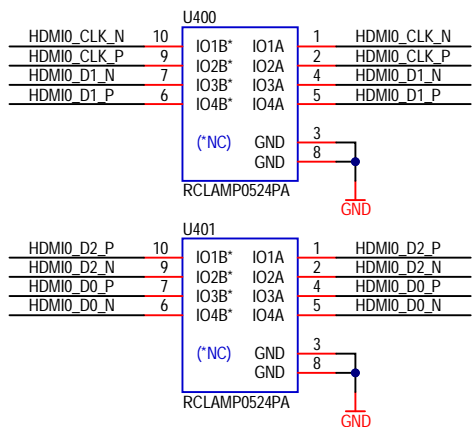

LAYOUT:

Place decoupling capacitors as close as possible to M.2 connector.

ESD PROTECTION

HDMI #0 (TYPE A)

TESTPOINTS (DEBUG)

BOM:

HDMI #0 connector:
 Wurth Elektronik, MPN = 685 119 134 923
 BOOMELE, MPN = HDMI-001
 Description: Type A (Standard), 19 pins, 0.50mm pitch, horizontal, SMD.

LAYOUT:

Route HDMI signals as matched length 100 Ohm differential pairs, each signal within a pair should ideally be matched to better than 0.15mm. Pairs don't typically need any extra matching as they only have to be matched to 25mm.

LAYOUT:

connect the IO1A - IO4A on the connector side.

LAYOUT:

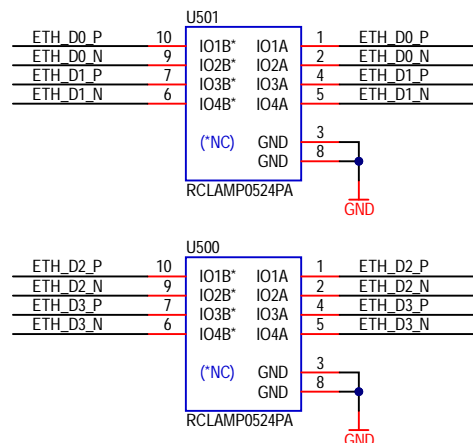

Place the TVS array diodes as close as possible to the HDMI connector.

ESD PROTECTION

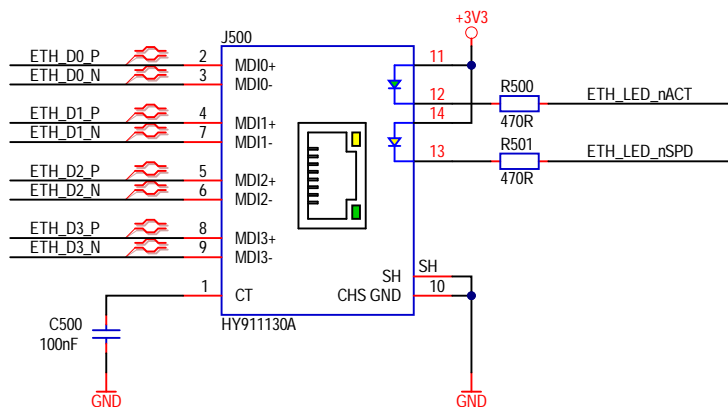

LAYOUT:

connect IO1A - IO4A on the connector side.

LAYOUT:

Place TVS array diodes as close as possible to RJ45 connector.

100/1000M ETHERNET

LAYOUT:

Route Ethernet signals as matched length 100 Ohm differential pairs with suitable clearances. Length matching between pairs should be better than 50mm, so in the typical case no length matching is required. However the signals within a pair need to be length matched, ideally to better than 0.15mm.

BOM:

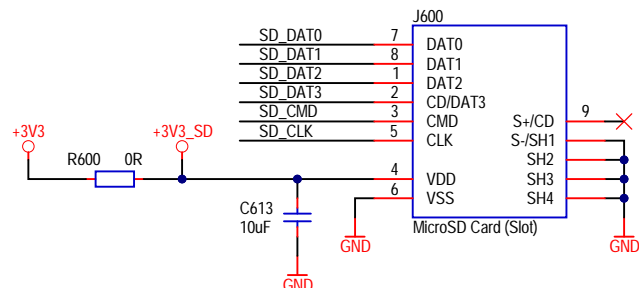

RJ45 -> compatible connectors:
HanRun, MPN = HR911130A (HY911130A)
Link-PP, MPN = LPJG0806FBNL
Description: 100/1000M RJ45, Tab-down, G/Y LEDs

MICRO SD CARD

SCH:

Used MicroSD card slot: Hmax = 2.00 mm

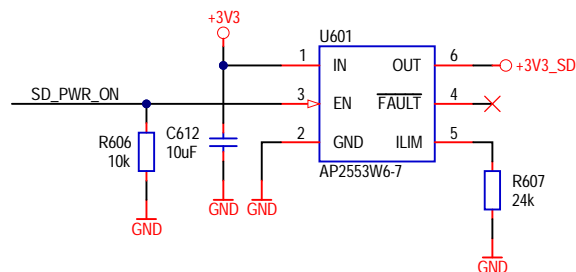

USER:

SD Card only for CM4 Lite module with no on-board Flash memory chip (eMMC).

BOM:

MicroSD slot -> compatible components:
GCT, MPN = MEM2055-00-190-01-A
SOFNG, MPN = TF-015
HOAUC, MPN = HYC77-TF09-200
XUNPU, MPN = TF-115

PWR SWITCH

BOM:

Texas Instruments, MPN = TPS2521DBV
Diodes, MPN = AP2553W6-7
Diodes, MPN = AP22653W6-7

SCH:

ILIM resistor = 24k => current limit set to 1.05A

FAN1 (5VDC, ON/OFF)

USER:

FAN1 can be controlled by FAN1_CTRL line (by static GPIO level or by using PWM mode).
FAN1 control can be disabled (always on) by assembly R802 jumper.

FAN2 (5VDC PWM CTRL IC)

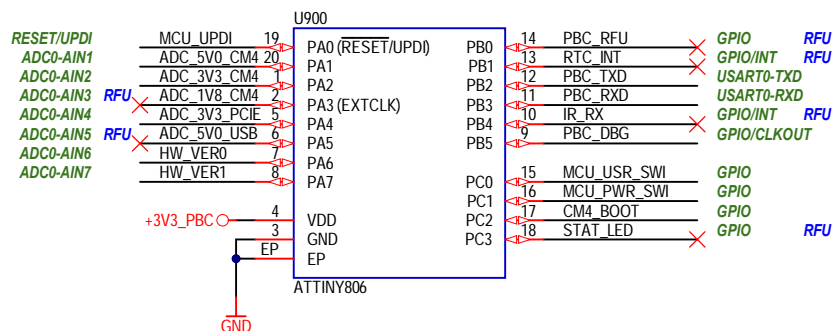

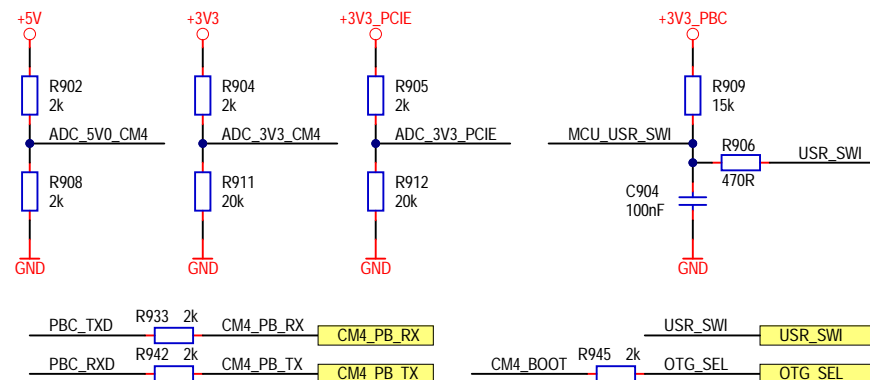

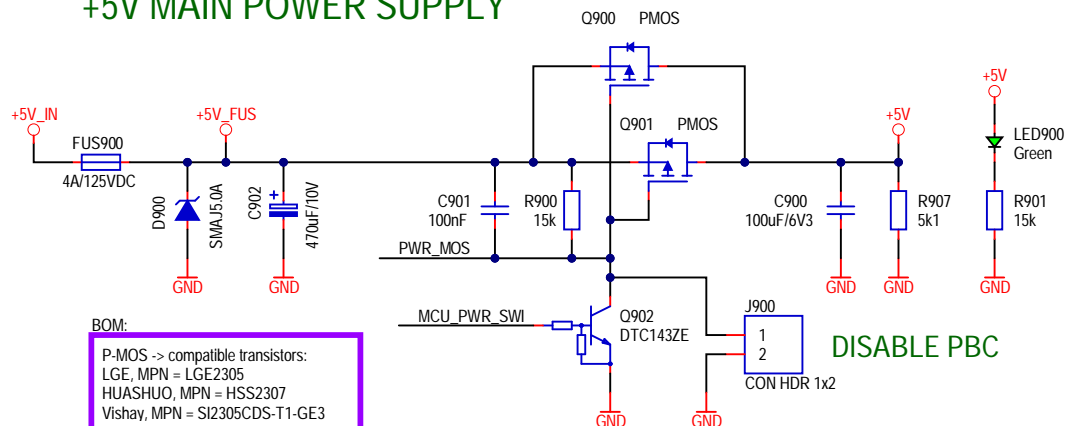

BOM:

4-pin connector (2.54mm pitch):
Molex, MPN = 47053-1000.
PINREX, MPN = 744-81-04TW30.
